## **What's New In AutoCAD?**

Cadalyst will host its second annual Design Con in Milwaukee June 9, 2020, to explore future and emerging technologies in CAD and their impact on the workflow and planning process. In this two-part series, we'll look at new features and platforms for the design and architecture software sector. Leveraging technology: Ever the disruptors, Autodesk is constantly improving its software products. We're excited to share some of the highlights of what you can expect to see in the latest release of AutoCAD 2023, which is currently in preview. Here are a few examples of the latest feature enhancements you can look forward to. A few years ago, you might have been able to adapt to the change in position of a tool or command. In AutoCAD 2023, you'll be able to take advantage of the new 3D modeling tools to instantly track tools with Object Snap 3D, or move them in other dimensions with the new 2D Tools Feature. We've also developed new tools to help make working with a team easier. When working with others, you'll be able to coordinate drawing sessions in a more collaborative way, and quickly manage documents with session management tools. AutoCAD can now animate drawings (video: 3:07 min.), and you can also use internal parametric curves to create and align objects. Objects created with AutoLISP are more stable and can be easily moved, and you can import and export AutoLISP files with the new Import/Export /2D Options command.
