The Ham intelligent calculator is a new calculator for the Ham radio hobbyist. It is designed to simplify a number of calculations commonly used by Hams. One of them is calculating impedance, and quite a few others as well. HAMIC is a circuit building and calculating tool. It's a great tool that could be used by anyone, if they are interested in electronics. FluidSynth is an application for the Commodore Amiga to play music. It provides a comprehensive audio synthesis environment where synthesis, playback and editing are tightly integrated and controlled from a single user interface. Highlights include music instrument engines and effects; a powerful and easy-to-use editor with a large library of sample and instrument content; complete MIDI support to communicate with other instruments and time-synchronised with other applications. Midi Pro can be used as a MIDI Controller with a MIDI Keyboard, MIDI Foot controller, MIDI Korg microKORG synthesizer or as a musical instrument for normal MIDI playback. It also offers a fantastic library of sound effects for add-ons. KontaktPlayer(TM) is a sequencer, sampler, effects unit, virtual MIDI controller, virtual instrument and performance application. It enables you to compose, record, sequence and edit audio using the familiar piano roll editing interface. It provides a fast and powerful algorithmic engine to help you realise your ideas with truly inspiring results. Powerful sound design and a comprehensive library of samples, loops and effects provides you with immense musical freedom. Enter, calculate, graph, and save results from hundreds of calculations with ease. HAMIC for Hams is an all-in-one circuit building and calculations software application designed for your electronic ham radio hobby. HAMIC supports simple to complex calculations and can help you make design decisions that others can copy. HAMIC is designed for the electronic ham radio enthusiast! HAMIC is a circuit building and calculations software application designed for your electronic ham radio hobby. HAMIC for Hams is an all-in-one circuit building and calculations software application designed for your electronic ham radio hobby. It was specifically designed to help you understand more about circuit analysis for Hams. HAMIC is a circuit building and calculations software application designed for your electronic ham radio hobby. Features: * Hundreds of built in calculations * Simple to complex calculations * All built in formulas are available to use * Toolbox for readily available additional calculators * Graphs and Calculations * Save to worksheet and retrieve later * Worksheet allows for sorting data HAMIC The Software for Hams Description: Create, Calculate, Graph, and Save Results from hundreds of calculations with ease. HAMIC The Software for Hams is an all-in-one circuit building and calculations software application designed for your electronic ham radio hobby. HAMIC The Software for Hams is an all-in-one circuit building and calculations software application designed for your electronic ham radio hobby. Design for Hams Description: Design for Hams is a powerful circuit design application that enables you to model, simulate and build electrical and electronic circuits. Design for Hams is a powerful circuit design application that enables you to model, simulate and build electrical and electronic circuits. Features: * Hundreds of built in calculators * Complex calculations * Easy to use interface * Dozens of readily available built in calculators * Export to wikipedia articles, 5, 20 and 50 pins * Worksheets to import and manage your schematics * Find, Connect, Copy, Move, Delete, Zoom, Mirror, Export and more * Worksheets can be saved for recall later * Worksheets can be placed on your computer for quick recall * You can select which pins to include in the worksheet * Supports most modern languages such as C++, C#, Visual Basic and Python * The design can be created using a graphical interface or from scratch * Using the graphical interface you can create sche

HAMIC is a circuit builder and calculator that enables you to create simple to complex circuits and perform all kinds of calculations expressed in various units. Explore various sections The Ham Intelligent Calculator, also called Hamic, is a program designed to simplify a number of calculations commonly used by Hams. It is designed for the Ham radio hobbyist, but may be useful to others as well. Hamic has a simple to use, but powerful graphical interface that allows solving simple circuits such as resistors in series or parallel, or more complex circuits such as L networks or T networks. As well, other calculations such as SWR, reactance, resonant frequency, inductance of an air core coil, and antenna impedance are supported. One of the more powerful features of Hamic is to solve for almost any unknown variable in a circuit; Hamic can even solve L networks without having to use Smith charts. More features and tools Also, Hamic can easily convert between a number of different units. Once you have finished your work, your calculations can be saved to a worksheet and retrieved later. It supports many calculations including resistors in series or parallel, capacitors, inductors, impedances, reactance with capacitors or inductors and many more. All in all, HAMIC is a very useful application that enables you to create simple to complex circuits and perform all kinds of calculations expressed in various units.
