Bloxiq is a 3D puzzle game where the most common method of transport is not an inanimate object. Instead, the primary method of transport is a cube. Players earn cash by placing cubes into the correct position, often aided by various tools at their disposal. Bloxiq is the 3D version of the popular Dots game. Like Dots, players build up their cash by laying cubes. The number of cubes laid is determined by a player's finishing position (higher is better) and the placement of the cubes determines the strategy to follow. The variety of ways to place the cubes and the variety of cubes available means players can choose a variety of tactics to optimize their play. Players can browse through their pile of cubes while they build the pile. However, it is never too late to build a cube - players can also choose to build a cube before choosing their strategy. This means players can decide how to spend their building time before laying the cubes. Cubes can come in a variety of shapes and colors. Players can also place different types of cubes in the same pile (see the "Multiple Types" section below for more information). Thus, games involving large numbers of identical cubes are possible, as are games where cubes come in differing colors. Once a pile is finished, players play a match against the clock. Players get points for every cube that is laid down, though the number of points varies depending on the cube's speed. This means players cannot be lazy - they must lay cubes at a brisk pace to maximize their score. Players can play matches against friends, against an opponent, or against the computer. The challenge of each level is appropriate to the user's skill and strategy, so no matter the challenge, players can enjoy a satisfying experience. Similar to Dots, Bloxiq is a fun, casual game in which each aspect has a strong appeal to both the casual and serious player. Features: - Hours of game play for players of all experience levels - Tons of cubes (150 different shapes and sizes - see the "Types of Cubes" section below for more information) - Variations in placement (see the "Placement" section below for more information) - Multiple types of cubes (see the "Types of Cubes" section below for more information) - A variety of shapes and colors (see the "Shapes and Colors" section below for more information) - A variety of ways to place cubes (see the "Pile Generation
